

Aquarium Microbiome Analysis Report

About this report

This report describes the results from DNA analysis of the following sample:

Sample ID	1000261
Sample Name	DT210 WPassive Sulfur Denitrator
Tank Name	DT210
Sample Date	2020-10-19 08:00 PM
Report Date	11/25/2020 14:17

These data provide detailed information on the community of microbes living in your aquarium. Each type of microbe in your sample was identified by comparing DNA sequences from your sample with a database of DNA sequences from known types. The relative abundance of each sequence can be used to compare the relative abundance of each type across samples.

Aquarium Microbiome Analysis Report

Part 1: Diversity and balance

Number of Microbial Types

Diversity Score (Percentile)

Your tank's microbiome is among the least diverse of tanks we tested. (<25th percentile)

If you want to increase diversity, consider adding live rock or other natural sources of live microbes.

Your sample was less diverse than at least half the tanks we tested. (25th to 50th percentile)

Continue to monitor, or increase diversity by adding live microbes from natural sources.

Your sample was more diverse than most of the tanks we tested. (>50th percentile)

Celebrate your success! The diversity of your aquarium's microbiome is higher than the average reef tank.

Aquarium Microbiome Analysis Report

Balance Score (Correlation with Typical Abundance)

The balance between microbial types in your sample is very different than most reef tanks we tested. (score < 0.25)

Considering adjusting your tank's microbiome by changing the conditions, e.g., nutrient types / levels.

The balance of microbial types in your sample shows both similarities and differences with the typical reef tank (scores 0.25 to 0.5)

Continue to monitor, or adjust by changing conditions in your tank.

The balance of microbial types in your tank is very similar to a typical reef tank. (scores above 0.5)

Enjoy your healthy aquarium! Your tank's ecosystem has achieved a balance similar to that of established reef tanks.

Aquarium Microbiome Analysis Report

Part 2: Abundance of each family in your sample

Bars indicate the relative abundance of all microbial families accounting for at least 1% of the community either in your sample or the typical reef tank.
